🔗 SOHAIL1510 📁 Portfolio

Professional Summary

Computer Engineering undergraduate with hands-on experience in Full Stack Development, Data Engineering, and Cloud Technologies. Skilled in building scalable web applications using React.js, Next.js, Node.js, Express.js, SQL, and MongoDB while developing data-driven solutions using Python, Pandas, SQL. Experienced in REST APIs, ETL pipelines, Docker, CI/CD, cloud deployment, and database optimization. Passionate about building AI-powered applications and scalable data platforms.

Education

International Institute of Information Technology , Pune <i>Bachelor of Engineering in Computer Engineering - 8.72</i>	<i>Aug 2022 - May 2026</i>
Shri Mahavir Junior College , Lasalgaon <i>Class XII - 89.20</i>	<i>Aug 2020 - May 2022</i>
N.V.P.M.English Medium School , Lasalgaon <i>Class X - 88.20</i>	<i>Aug 2019 - May 2020</i>

Experience

UI/UX Design Intern <i>Autotropic Cloud Pvt ltd</i>	<i>Feb 2025 - April 2025</i>
– Designed responsive web interfaces and interactive user experiences using Figma and Adobe XD. – Collaborated with developers to convert UI designs into production-ready applications. – Created wireframes, prototypes and design systems following modern UI/UX principles. – Improved usability through user research, iterative design and stakeholder feedback.	

Projects

BoloSetu AI(AI Telecalling SaaS Platform)	<i>BoloSetu AI</i> 🔗
– Developed a production-ready AI-powered outbound calling SaaS platform using Next.js, Node.js, Prisma, SQLite and Docker for automated customer engagement. – Integrated Google Gemini LLM to conduct context-aware conversations, answer customer queries and generate intelligent real-time responses. – Built campaign management modules supporting CSV-based customer import, knowledge base integration, call scheduling and automated campaign execution. – Implemented AI-generated call transcripts, summaries and analytics dashboards to monitor campaign performance and customer interactions. – Designed secure REST APIs, authentication, multi-tenant architecture and scalable backend workflows for enterprise deployment. – Containerized the complete application using Docker and implemented deployment-ready architecture with environment configuration and CI/CD support. – Integrated telephony providers to automate outbound calling workflows and improve operational efficiency for coaching institutes and businesses.	
SkillShareHub(Virtual Classroom)	<i>peer-learning-app</i> 🔗
– Developed a full-stack peer-learning platform using React.js, Node.js, Express.js and MySQL, enabling students to connect with mentors and share educational resources. – Designed and implemented JWT-based authentication, role-based authorization, secure password hashing using bcrypt, and protected REST APIs for user management. – Built scalable RESTful APIs supporting teacher preferences, course management, discussion posts, resource sharing, favorites, and profile management. – Designed normalized relational database schemas with optimized relationships, foreign keys and indexing to improve data integrity and query performance. – Integrated frontend and backend using asynchronous API communication, dynamic state management and responsive UI components. – Implemented CRUD operations, form validation, error handling and session management to improve application reliability and user experience. – Deployed the frontend on Vercel and backend as cloud-hosted services with environment variable management	

and production-ready configurations.

Air Quality Prediction using Python and Prophet

- Developed an end-to-end data analytics and forecasting pipeline using Python, Pandas, NumPy and Facebook Prophet for PM2.5 air quality prediction.
- Collected, cleaned and transformed four years of historical pollution datasets by handling missing values, outliers and feature engineering.
- Performed exploratory data analysis (EDA), statistical analysis and trend visualization to identify seasonal pollution patterns.
- Built and evaluated a time-series forecasting model using Facebook Prophet for predicting future AQI values.
- Visualized historical trends, forecast intervals and seasonal components using Matplotlib.
- Integrated prediction outputs into an interactive frontend dashboard enabling users to explore pollution trends and future forecasts.

Dockerized Node.js Application with GitHub Actions CI/CD

[Github](#) 

- Containerized a Node.js application using Docker, ensuring consistent development, testing and production environments.
- Created optimized multi-stage Docker images using Node.js Alpine, reducing image size and improving runtime performance.
- Designed CI/CD workflows using GitHub Actions to automate dependency installation, testing, Docker image builds and release pipelines.
- Configured GitHub Secrets for secure authentication and automated Docker Hub deployment.
- Implemented automated versioning and container publishing, eliminating manual deployment and improving software delivery efficiency.
- Improved deployment reliability by integrating continuous integration, automated builds and production-ready container workflows.

Technical Skills

Programming Languages: Python, JavaScript, TypeScript, SQL, C++

Frontend: React.js, Next.js, HTML5, CSS3, Tailwind CSS, Bootstrap, Responsive Design

Backend: Node.js, Express.js, REST APIs, JWT Authentication, MVC Architecture

Databases: MySQL, MongoDB, PostgreSQL, SQLite

Data Engineering: ETL Pipelines, Data Warehousing, Data Modeling, Pandas, NumPy, Data Cleaning, Data Transformation

Cloud & DevOps: Microsoft Azure, Docker, Docker Hub, GitHub Actions, CI/CD, Vercel, Render

Tools: Git, GitHub, VS Code, Postman, Jupyter Notebook, Figma, Adobe XD, Canva

Core Concepts: Object-Oriented Programming, Database Management Systems, Data Structures, Operating Systems, Computer Networks, System Design, Data Analytics

Position of Responsibility

GDG: Web Development (Co-Lead) 2024-25
